

QA Automation Engineer

Work as an individual or collaborative Quality Assurance consultant on client projects. Design and execute test plans and stand up automated testing frameworks.

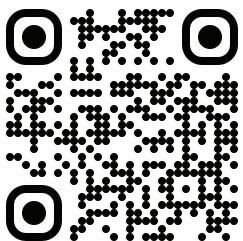

DUTIES AND RESPONSIBILITIES

- Develop and maintain automated test scripts to ensure software quality and reliability
- Design test plans, run automated tests, and integrate testing into CI/CD pipelines
- Execute performance testing and maintain test frameworks
- Consolidate test results and create reports
- Ensure compliance with relevant standards and conduct security testing
- Collaborate with QA staff to identify test cases for automation

KNOWLEDGE, SKILL AND ABILITIES

- Associate's Degree or above
- 2+ years of QA Automation experience
- Proven work experience in software development and software quality assurance
- Strong knowledge of software QA methodologies, tools and processes
- Experience in writing clear, concise and comprehensive test plans and test cases
- Hands-on experience with automated testing tools
- Solid knowledge of SQL and scripting
- Experience working in an Agile/Scrum development process
- Experience with performance and/or security testing is a plus
