Software Engineer

Work as an individual or collaborative Software Development consultant on client solutions, enhancements, or integration projects.
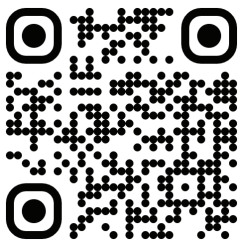

DUTIES AND RESPONSIBILITIES

- Analyze and establish criteria for deliverability, performance, maintenance, design, and cost based on business requirements
- Develop, implement, and validate designs and products to meet client needs
- Estimate time, quality, and resources for successful implementation
- Effectively communicate technical aspects of proposed solutions to client stakeholders
- Conduct periodic status checks and reassess project trajectory as necessary
- Collaborate with client resources, project managers, and other consultants at all stages of development
- Advise on strategies for post-sales technical support and maintenance

KNOWLEDGE, SKILL AND ABILITIES

- Associate's Degree or above in Computer Science, Computer Engineering, Information Systems or relevant experience
- Proficiency in one or more programming languages (C#, Python, Java, etc.) and/or web development technologies (HTML, JavaScript, JSON, etc.)
- Experience with relational databases (MSSQL, MySQL, Oracle) and/or document databases (CouchDB, MongoDB, Firebase, etc.)
- Familiarity with system design patterns a plus
- Experience working in an Agile Development environment (SCRUM, TDD, Kanban, etc.) a plus
- Proactive, energetic self-starter with excellent organization, communication, and interpersonal skills
- Desire to learn new skills, adapt to changing priorities and be able to effectively work on a team
